DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

In the Abstract

2. The abstract is replaced with the following: "A method for filling a compressed-gas container, in particular a compressed gas container in an airbag system, with a gas or gas mixture, or for producing a gas mixture in a compressed gas container. The filling is accomplished by introducing a gas mixture, or at least one gaseous component of the gas mixture, into a cooled compressed-gas container in the form of a gas or liquid-cooled gas.

Reasons for Changes

3. The abstract was amended to coincide with the guidelines governing the abstract MPEP 608.01(b).

Allowable Subject Matter

4. Claims 1-3, 5-6, 10-12, 15-18 and 20-25 are allowed.

The following is an examiner's statement of reasons for allowance: The specific limitation of "introducing a gas mixture as cryogenically liquefied gas or at least one gas component of the gas mixture as cryogenically liquefied gas into a cooled compressed-gas container, while the compressed-gas container is moving through a cooling bath," in the method as claimed in claim 1 and "introducing a gas mixture as gas or at least one gas component of the gas mixture as gas into a cooled compressed-gas container, while the compressed-gas container is moving through a cooling bath," in the method as claimed in claim 16 are not anticipated or made obvious by the prior art of record in the examiner's opinion.

For example Kesten et al. (US PGPub 2008/0016884) discloses a method for high-pressure filling of a pressure vessel with a gas or gas mixture (Page 1, paragraph 2). In said method the pressure vessel is cooled and filled (Page 1, paragraph 9). Kesten also discloses closing the vessel in the cooled state and producing pressure in the filled and closed pressure vessel by warming (Page 1, paragraph 9). Kesten also discloses an internal tank pressure of 1000 to 1200 bar.

Wolff et al. (US Patent 4,715,786) discloses a gravimetric method of measuring gas quantity.

However, the prior art of record fails to teach or suggest the specific limitations of "introducing a gas mixture as cryogenically liquefied gas or at least one gas component of the gas mixture as cryogenically liquefied gas into a cooled compressed-gas container, while the compressed-gas container is moving through a cooling bath," in the method as claimed in claim 1 and "introducing a gas mixture as gas or at least one gas

component of the gas mixture as gas into a cooled compressed-gas container, while the compressed-gas container is moving through a cooling bath," in the method as claimed in claim 16.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
